RCU

UPLINK CHAIN REFURBISHMENT

Sustainability, supply chain issues and lead times are the buzzwords of our time. ND SATCOM's RCU 6000 can be the answer to some of these topics when it comes to redundant uplink chains.

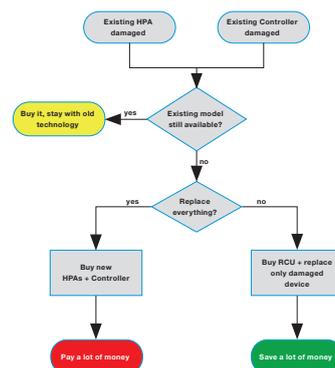

What if you have an HPA redundancy system and one of the devices is faulty. Today, repairs are costly and time consuming or are not possible at all. Therefore, it is sometimes easier to replace the entire switching system even when only one device is defective. If you face this issue, ND SATCOM has the perfect solution for you by only replacing the faulty device. This will significantly reduce the financial impact and allows you to update your station step by step.

ND SATCOM's RCU 6000 is capable of monitoring and controlling any device in your uplink and downlink chain and will even be able to combine multiple redundancies in one device. It replaces existing redundancy units and provides state-of-the-art technology.

Additionally the RCU 6000 is the ideal investment for the future. The user interface gives the option to change your running configuration from, for example, a 1:1 to a 2:1 without buying a new redundancy controller. New configurations can be installed from the user interfaces.

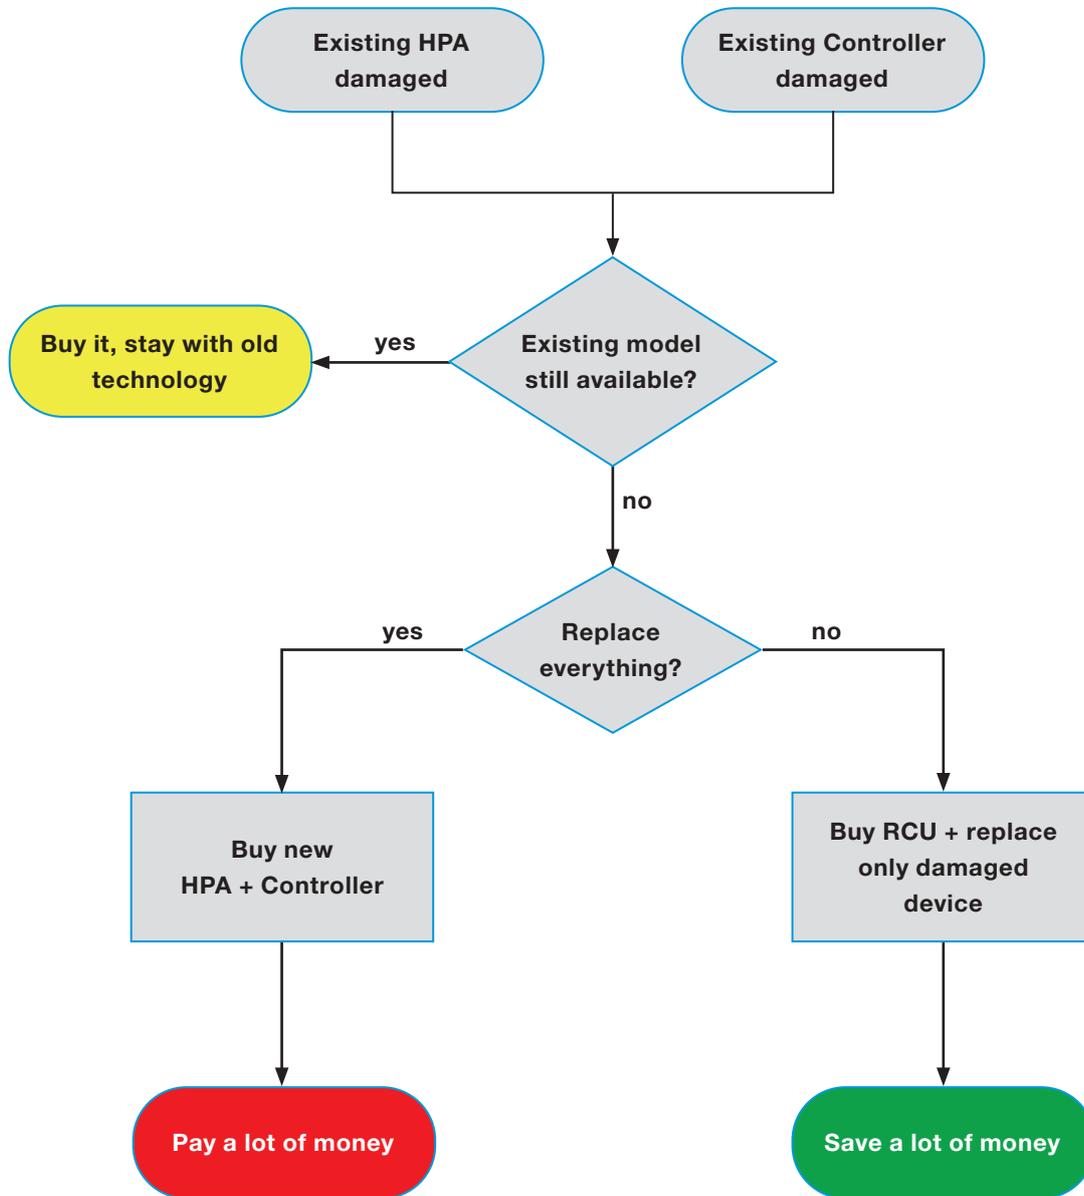

BENEFITS FOR YOU:

- Reduce costs by exchanging the faulty device only
- Combine of different brands or models into one redundancy solution
- Gain enormous flexibility
 - Works with any HPA (CPI, Xicom, etc...)
 - Works with any Modulator
 - Works with any Upconverter
 - Replaces any redundancy controller
- Combine chains or have separate redundancies
 - Presets for 2:1 configurations (up to 6:1)
- Future proof by changing configurations via user interface (e.g. from 1:1 to a 2:1)
